

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

|               |                                                                   |
|---------------|-------------------------------------------------------------------|
| Date          |                                                                   |
| Team ID       |                                                                   |
| Project Name  | Virtual Agent–Driven SLA Breach Awareness & Justification System. |
| Maximum Marks | 4 Marks                                                           |

**Functional Requirements**

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                                                                                                    |
|--------|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | Incident Monitoring           | Continuously monitor Incident SLAs. Identify incidents approaching SLA breach. Detect SLA risk automatically.                         |
| FR-2   | SLA Breach Detection          | Check SLA status in real time. Trigger workflow when SLA is at risk. Mark Incident as "SLA at Risk".                                  |
| FR-3   | Virtual Agent Interaction     | Notify assigned user through Virtual Agent. Request SLA acknowledgement. Collect breach justification from the user.                  |
| FR-4   | Automated Notifications       | Send email notification to Manager. Notify Assignee about SLA risk. Escalate critical SLA breaches automatically.                     |
| FR-5   | Justification Management      | Store breach reason in Incident record. Validate mandatory justification before closure. Maintain justification history for auditing. |
| FR-6   | Dashboard & Reporting         | Display SLA breach trends. Show pending justifications. Generate charts and performance reports. Provide manager dashboard insights.  |

**Non-Functional Requirements**

The following are the non-functional requirements of the proposed solution.

| NFR No. | Non-Functional Requirement | Description                                                                           |
|---------|----------------------------|---------------------------------------------------------------------------------------|
| NFR-1   | Usability                  | Simple and intuitive interface for ServiceNow users, managers, and support teams.     |
| NFR-2   | Security                   | Ensure only authorized users can access SLA data, reports, and justification records. |
| NFR-3   | Reliability                | Provide consistent SLA monitoring and uninterrupted workflow execution.               |
| NFR-4   | Performance                | Detect SLA risks and send notifications with minimal delay.                           |

|              |                 |                                                                                                                 |
|--------------|-----------------|-----------------------------------------------------------------------------------------------------------------|
| <b>NFR-5</b> | Scalability     | Support monitoring of a large number of incidents and SLA records without affecting performance.                |
| <b>NFR-6</b> | Availability    | Dashboard, reports, and Virtual Agent should remain available throughout business operations.                   |
| <b>NFR-7</b> | Maintainability | Allow administrators to modify workflows, reports, and dashboards with minimal effort.                          |
| <b>NFR-8</b> | Auditability    | Maintain complete logs of acknowledgements, breach reasons, notifications, and workflow actions for compliance. |
