

Ideation Phase

Define the Problem Statements

Date	
Team ID	
Project Name	Virtual Agent–Driven SLA Breach Awareness & Justification System
Maximum Marks	2 Marks

Customer Problem Statement :

A Customer Problem Statement helps identify the actual challenges faced by end users while performing their daily tasks. It focuses on understanding the customer's role, their goals, the obstacles they encounter, the reasons behind those obstacles, and how those problems impact their work. Defining clear problem statements enables the team to design an effective solution that addresses real business needs instead of assumptions.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	IT Support Engineer	Resolve incidents before SLA deadlines and provide timely service to users.	I often miss incidents that are close to SLA breach and sometimes forget to provide proper breach justification.	There is no proactive notification system or guided workflow reminding me to take action before SLA violations occur.	Stressed, less productive, and worried about SLA breaches, escalations, and poor service quality.
PS-2	IT Service Manager	Monitor SLA compliance, track team performance, and reduce SLA violations across the organization.	I cannot easily identify at-risk incidents, pending breach justifications, or recurring SLA issues in real time.	The existing process lacks centralized dashboards, automated reports, and proactive governance mechanisms.	Concerned about compliance, customer satisfaction, operational efficiency, and overall service performance.
