Problem – Solution Fit

Description

The Virtual Agent–Driven SLA Breach Awareness & Justification System addresses the challenge of unnoticed SLA breaches and delayed responses in IT support. The solution automates SLA monitoring, notifies users about SLA risks, collects mandatory breach justifications, and provides managers with dashboards for better visibility and decision-making.

Purpose

- **Early SLA Awareness** – Alerts users before an SLA breach occurs.
- **Automated Notifications** – Sends timely notifications using Flow Designer and Virtual Agent.
- **Mandatory Justification** – Ensures users provide a reason for SLA breaches.
- **Improved Accountability** – Helps managers track acknowledgements and breach reasons.
- **Real-Time Monitoring** – Displays SLA status through dashboards and reports.
- **Better Decision Making** – Provides insights for improving SLA performance and reducing future breaches.
